# How to use the catalogue page

## 1 Main Contents

Select an application line from the main Table of Contents. Each line is color coded in alphabetical order.

## 2 Tool Selection Guide

Choose the required machining solutions and tools from tool selection guide.

## 3 Products Page

Obtain detailed information of products such as dimensions, grades and related parts etc. Holder and insert pages are organized separately.

## 4 Alphabetical Index

All tools are listed in the alphabetical index at the end of the catalogue.

## 1 TaeguTec mill thread

**MT** - Mill thread  
**E** - End mill  
**C** - Carbide

## 2 End mill type

☐ - General  
**B** - Internal coolant hole  
**BF** - More flutes number  
**Q** - Reduced neck diameter  
**Z** - Coolant hole in the flutes  
**H** - Chamfering ability  
**M** - Triple lead  
**K** - Double lead  
**S** - Short flute  
**SH** - Short flute for hard material  
**D** - Drilling ability  
**I** - Single point edge

## 3 Shank diameter

**06** 6.0 mm  
**10** 10.0 mm

## 4 Cutting diameter

**031** 3.1 mm  
**04** 4.0 mm

## 5 No. of flutes

**C** - 3 flutes  
**D** - 4 flutes  
**E** - 5 flutes  
**F** - 6 flutes  
**G** - 7 flutes  
**H** - 8 flutes

## 6 Length of thread (APMX)

**10** 10.0 mm

## 7 Thread pitch

**0.25-4.0 mm** (Thread pitch)  
**72-7 TPI** (Threads per inch)

## 8 Thread standard

**TS-THREAD**

A diagram showing a cross-section of a piston and crank mechanism. A blue piston is connected to a yellow crankshaft by a yellow piston pin. The piston is shown in a compressed state, with red wavy lines representing the combustion pressure pushing it down. The crankshaft is shown in a horizontal position, with the piston pin attached to its end. The entire mechanism is housed within a grey block representing the engine block.

► NOF: Number of flutes

●: Standard items

A schematic diagram of a piston and crank mechanism. A blue piston is shown at the top, connected to a yellow crankshaft. The piston is surrounded by red wavy lines representing combustion pressure. The crankshaft is shown in a cross-section view, with the piston rod passing through it.

Cutting Condition

C74

●: Standard items

A schematic diagram of a piston and crank mechanism. A blue piston is shown in a cylinder, connected to a yellow crankshaft. The piston is at the top of its stroke, and the crankshaft is in a horizontal position. The cylinder walls are shown in grey.

## Solid carbide drills for T-CHAMFER

# TCAMPER

- 'SDL' is factored with a 45° insert positioned in insert pocket
- Solid carbide drill with internal coolant holes is available on request

●: Standard items

► The maximum chamfer size is obtained when using the smallest drill diameter in the drilling range

# TSL-NC

Drill sleeves for Swiss type automatic lathes (Fixed type, internal coolant)

- NOF: Number of flutes
- SSC: Seat size code

●: Standard items

Technical drawing of a reamer showing side and end views with dimensions:

- Side View:** Shows the reamer with dimensions  $DC$  (total diameter),  $SSC$  (flute length),  $LPR$  (total length), and a  $20^\circ$  angle.
- End View:** Shows the reamer with dimensions  $1.07$  (radius) and a  $25^\circ$  angle.

• Helical flute for through hole  
• For H7 hole tolerance

**TDEEP**

A diagram of a 3D printer nozzle assembly. Callout 1 points to the nozzle body, and callout 4 points to the nozzle tip.

1. Head shank
2. Insert
3. Guide pad
4. Guide pad protector

[illegible]

- ▶ A+B is for outer four start thread connection type
- ▶ A+C is for inner single start thread connection type

## Assembly of TBTA-R series

- 1. Head shank
- 2. Cartridge & lock screw
- 3. Guide pad
- 4. Resin guide pad & lock screw

\* Standard edge geometries are not suitable for reaming titanium and high temperature alloys.  
In order to choose a proper geometry, please ask for our recommendations.

- ▶ The given cutting data recommendations refer to the short holders (3xD effective reaming overhang).  
For longer holders, the cutting speed to be reduced proportionally.
- ▶ For relatively large leading angles (spot-facing geometries), the feed to be reduced up to 30%.
- ▶ All the given cutting data recommendations refer to the machines with spindle through coolant supply.

\* Standard edge geometries are not suitable for reaming titanium and high temperature alloys.

In order to choose a proper geometry, please ask for our recommendations.

- ▶ The given cutting data recommendations refer to the short holders (3xD effective reaming overhang). For longer holders, the cutting speed to be reduced proportionally.
- ▶ For relatively large leading angles (spot-facing geometries), the feed to be reduced up to 30%.
- ▶ All the given cutting data recommendations refer to the machines with spindle through coolant supply.

► The cutting conditions in the table below should be used to start a new application.  
Optimal conditions for a specific application should be evaluated by examining the results and changing the machining conditions accordingly.

► For more information of material groups, see the materials & grades "material conversion table"

■ Steel
 ■ Stainless steel
 ■ Cast iron
 ■ Nonferrous

► The cutting conditions in the table below should be used to start a new application.  
Optimal conditions for a specific application should be evaluated by examining the results and changing the machining conditions accordingly.

► For more information of material groups, see the materials & grades "material conversion table"

■ Steel 
 ■ Stainless steel

|    |              |                  |                 |     |     |

## ► Modular head replacement instructions

1. Remove both outer inserts, then remove the center drill head.  
(When clamping, go in the reverse order)
2. Use a wrench to turn the screw counter-clock-wise to remove the modular head.
3. Insert the setting gauge into the bottom of the disconnected modular head.

4. Rotate the screw to adjust to the same height with the setting gauge.

Setting gauge

| Drill dia. | Designation       |
|------------|-------------------|
| D26-D29    | SG TNDH D26-29-TP |
| D30-D35    | SG TNDH D30-35-TP |
| D36-D39    | SG TNDH D36-39-TP |
| D40-D43    | SG TNDH D40-43-TP |
| D44-D50    | SG TNDH D44-50-TP |

5. Remove the height adjusted modular head from the setting gauge and attach it to the holder.

## ► Modular head disassembly in the event of center drill damage

If the modular head cannot be unclamped due to center drill damage, insert the wrench into the rear section of the shank. Then, turn it clock-wise to disassemble the modular head.

Damaged center drill

Disassembling wrench

Wrench handle

► Disassembling wrench and handle are included with the modular drill holder. (MDB Dxx/xx...)

## ► XM-REAM user guide and notice

### How to check reamer diameter

Measure the dot side edge **1** and opposite side edge **2**.

### Reaming allowance

| Material          | Diameter  |           |
|-------------------|-----------|-----------|
|                   | < Ø10     | Ø10-12    |
| Steel & Cast iron | 0.07-0.10 | 0.07-0.15 |
| Aluminum & brass  | 0.07-0.10 | 0.10-0.15 |

\* Based on diameter

Ex) Ø9.85-9.93 mm pre-hole is recommended for Ø10H7 reaming in cast iron.

### Caution

- To ensure smooth coolant flow, the dot and slot orientation of the head must be aligned as illustrated.

## ► Screw torque

### For SPADE-RUSH

| Designation        | Thread | Length | Torx    | Tightening Torque |
|--------------------|--------|--------|---------|-------------------|
| <b>TS 30138D33</b> | M3     | 13.8   | Torx 10 | 2.0 Nm            |
| <b>TS 40178D25</b> | M4     | 17.8   | Torx 20 | 4.5 Nm            |
| <b>TS 40198D28</b> | M4     | 19.8   | Torx 20 | 4.5 Nm            |
| <b>TS 40210D3</b>  | M4     | 21     | Torx 20 | 5.0 Nm            |
| <b>TS 50230D3</b>  | M5     | 23     | Torx 20 | 5.0 Nm            |
| <b>TS 50250D35</b> | M5     | 25     | Torx 25 | 5.5 Nm            |
| <b>TS 60265D4</b>  | M6     | 26.5   | Torx 25 | 6.0 Nm            |
| <b>TS 60285D42</b> | M6     | 28.5   | Torx 25 | 6.0 Nm            |
| <b>TS 60320D5</b>  | M6     | 31     | Torx 25 | 6.0 Nm            |
| <b>TS 80340D6</b>  | M8     | 34     | Torx 25 | 7.0 Nm            |

### For MODU-R-DRILL

| Designation         | Thread | Length | Torx   | Tightening Torque |
|---------------------|--------|--------|--------|-------------------|
| <b>TDPS 0512-T7</b> | M5     | 12     | Torx 7 | 1.0 Nm            |
| <b>TDPS 0618-T8</b> | M6     | 18     | Torx 8 | 2.0 Nm            |

### For MODU-R-DRILL

| Designation           | Thread | Length | Torx        | Tightening Torque |
|-----------------------|--------|--------|-------------|-------------------|
| <b>TDPS 0722-W3.0</b> | M7     | 22     | Hexa 3.0 mm | 5.0 Nm            |

## ► Standard gundrill drivers for machining centers and lathes

### Drivers

Drivers are available for dedicated and CNC machines as well as any specified diameter or length. Please note that the driver codes and technical data can be found in the chart below.

| Driver type                          | Drawing                                                                                                                                                                | DCONMS x LS | Driver code |

► DC: Cutting diameter      ► DCX: Cutting diameter maximum

► Mounting bolt with coolant through hole is available on request (ordering example: SH M10x1.5x30-C)

► \*: Multi-Step milling is not recommended over the APMX      ► \*\*: When applying SQHU insert, APMX is 8.0mm.
